

# Take **CONTROL** of your **TRANSPORTATION** plan with Blue Horseshoe and TRAX.

## **TRAX** TRANSPORTATION FOR AX

Advanced Transportation Management has become both strategic and essential for companies to remain competitive in today's fast paced environment. Faced with the challenges of reducing costs and improving customer service, despite rising freight and fuel charges, businesses can no longer meet transportation complexities with manual or paper-based processes. Let us introduce you to TRAX...

### **About TRAX**

Transportation for AX, or TRAX, is a module solution that embeds advanced transportation planning and execution capabilities seamlessly into your new or existing Microsoft Dynamics AX system. TRAX provides a global enterprise transportation solution allowing for centralized freight planning across your business, or separate planning at the site/warehouse level. TRAX is specifically designed to add best-of-breed transportation services without having to purchase a separate Transportation Management System. Built on the Microsoft Dynamics AX platform, TRAX aggregates and consolidates your transportation data, providing "One Version of the Truth." There is no need to access separate systems to get the information you need.
